DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yamazaki (US 4,816,113).

Yamazaki teaches a method for forming a carbon layer by vapor phase deposition comprising steps of: cleaning the apparatus by removing undesirable products such as carbon deposition from the inside of the chamber (in between the carbon deposition or this would mean the cleaning is performed before another deposition); the chamber is then evacuated to 1×10^{-6} Torr or a higher vacuum condition; starting a film deposition process of the carbon (col. 5, line 41-col. 6, line 2; col. 3, line 41-col. 4, line 2). Unlike claimed invention, Yamazaki doesn't describe adjusting the content of particles having a particle size of 0.5 μm or more to 1000 particles/ ft^3/min or less (such as 500 or 100 particles/ ft^3/min). However, his steps of cleaning and evacuation the chamber to a high vacuum condition would reduce any undesirable products including particles having a particle size of 0.5 μm or more to 1000 particles/ ft^3/min or less (such as claimed 500 or 100 particles/ ft^3/min).

Art Unit: 1765

Referring to claim 3, the application of deposition of carbon layer as a protective layer on a thermal head performing thermal recording is known to one skill in the art as described in the background of the specification.
